

27.04.2023 WORKSHOP ON HEALTH DATA ALTRUISM BRUSSELS

WORKSHOP SUMMARY

The Hungarian team of SU HSMT and NDGH- in Brussels

Over 30 European stakeholders actively participated in our collaborative efforts to develop the final recommendations for data altruism practices in the implementation of construction of national and European health data spaces, encompassing the concept of broad consent.

The workshop hosted by the Hungarian Permanent Representation was organised by the Hungarian team, Semmelweis University Health Services Management Training Centre and the National Directorate General for Hospitals (OKFŐ), with support from the European Commission, and partners from Belgium, Finland, France, and the UK. The objective of the workshop was to engage stakeholders and gather their valuable insights on three key topic areas related to health data altruism practices. These areas were:

- Health data altruism organisations and business models,
- Citizens' involvement in health data altruism practices,
- GDPR-compliant health data altruism practices and consent as a legal basis.

The project is funded by the Third EU Health Programme

The workshop followed an interactive format to encourage active participation and collaboration among stakeholders. Each topic area was addressed through a series of statements that stakeholders were invited to vote on. The aim was to refine the final recommendations for the TEHDAS Report on data altruism, based on the collective expertise and perspectives of the participants. The results of the polls, along with the nuances and supporting evidence discussed during the guided discussions, were instrumental in shaping the final recommendations. The collaborative nature of the workshop ensured that the recommendations reflect the diverse perspectives and expertise of the participating stakeholders.

In conclusion, the stakeholder meeting -held on 27 April 2023 in Brussels- was a significant step towards shaping recommendations for data altruism practices in national and European health data spaces. The workshop successfully facilitated engagement, collaboration, and the exchange of valuable insights among stakeholders. We extend our sincere appreciation to all stakeholders and participants for their active involvement in this important discussion.

The project is funded by the Third EU Health Programme
